

PROTECT YOURSELF AND YOUR FAMILY

Install a carbon monoxide detector today.

Visit wolffbros.com for carbon monoxide detectors from BRK, Fieldpiece, First Alert, Kidde and more.

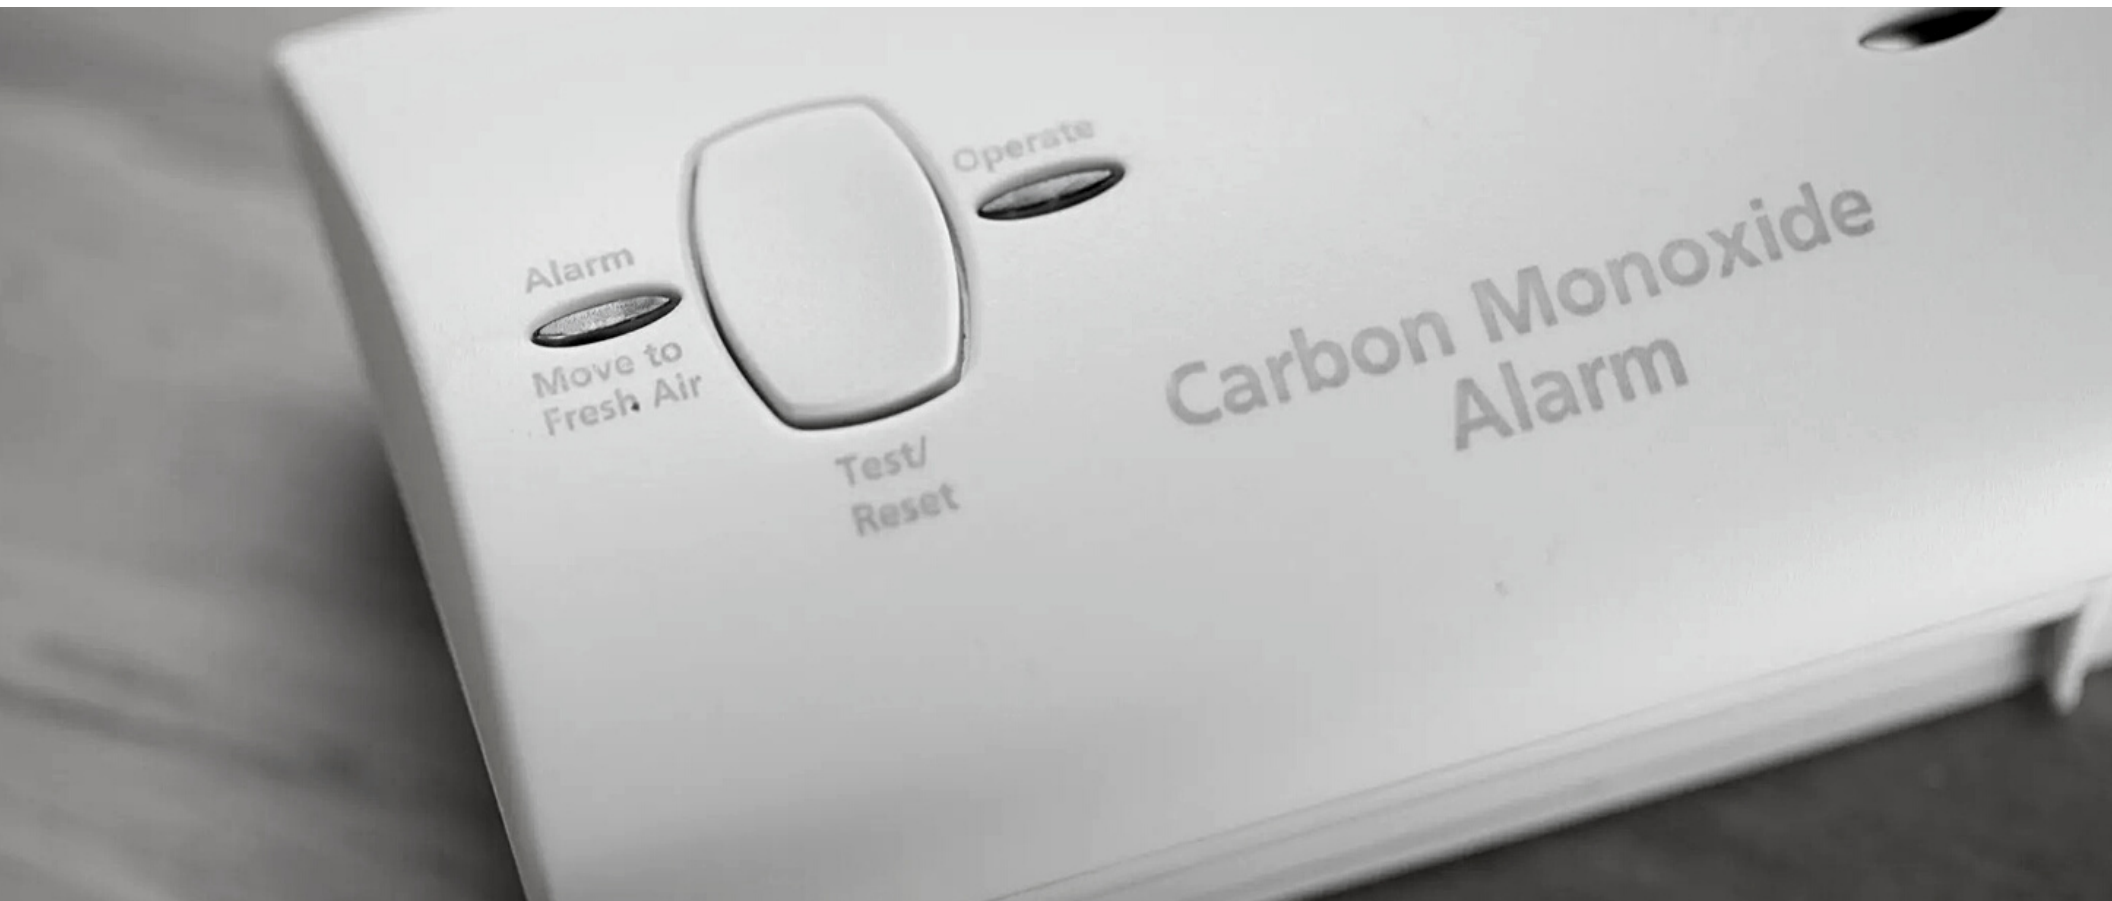

- Odorless, colorless gas formed by the incomplete combustion of fuels
- Produced by any fuel-burning device
 - o Main sources: furnace, dryer vent in a drying machine, and fireplace or chimney
 - o Have appliances regularly serviced and cleaned by a professional to help prevent poisoning
- Each year, more than 400 Americans die from unintentional CO poisoning not linked to fires, more than 20,000 visit the emergency room, and more than 4,000 are hospitalized (CDC)
- Every second counts. Detectors recognize poisonous gas and help provide an essential, early warning during an emergency

Detectors must be installed on every habitable floor and near sleeping areas in all residential and commercial buildings that burn fuel to heat and cook or have attached garages where vehicle engines can emit the odorless, tasteless toxic gas. If you already have a detector, it is recommended that you replace the batteries every 6 months and replace the whole unit every 5 – 7 years.

PROTECT YOURSELF AND YOUR FAMILY

Install a carbon monoxide detector today.

Effective Nov. 7, 2022: Owners of any building with fuel-burning appliances or attached garages in the city of **Akron** are now **required** by a new law to install carbon monoxide (CO) detectors.
