

Now announcing: Wolff Bros. Supply now carries Grease Interceptor Basins from Schier.

Grease Interceptor Basin:

- Is a plumbing device that captures fats, oils, and grease (FOG) from kitchen wastewater before it enters the sewer system, preventing blockages and environmental issues
- Uses gravity to separate FOG, which is less dense than water, causing it to float to the top, while the grease-free water exits from the bottom
- Is required for any new and existing food service establishment or other establishments where FOG from food preparation is introduced/discharged into the sewer system

Wolff carries multiple basin models to suit your plumbing needs:

- GB1 – 57lbs. at 25 GPM (small)
- GB2 – 119lbs. at 35 GPM (small)
- GB3 – 268 lbs. at 50 GPM (small)
- GB50 – 439lbs. at 50GPM or 287lbs. at 75 GPM (medium)
- GB75 – 861lbs. at 75 GPM (medium)
- GB250 – 1,895lbs. at 100 GPM or 1,196lbs. at 200GPM (medium)

Need another size? If a model is not in stock, Wolff will work with Schier to provide the model within six business days, including the larger GB-500, GB-1000, and GB-1500 models. Reach out to a Wolff Bros. Supply sales representative, text any of our branches or hop on wolffbros.com today to learn more!

Schier is an employee-owned specialty manufacturer of a premier lineup of 100% USA-made, high-capacity, lifetime guaranteed grease interceptors for commercial kitchens. In the last 20 years we have grown from a small regional company to the most widely specified and inventoried brand of grease interceptors sold throughout the U.S. Our purpose is to serve and provide for our employees by being a resilient company that offers best-in-class products and services.

★ *Lifetime Guarantee: In 2007, Schier introduced the industry's first lifetime guaranteed grease interceptor. Making it out of the right stuff (rugged, rotationally molded polyethylene) is just the first step - backing it up when things don't go as planned is the peace of mind you deserve.*
